QuikVixBOL System Quick Start Guide

1 Introduction

This guide was designed to help install and use QuikVixBOL as soon as it is downloaded.

As with all systems, there is a certain amount of foundation work necessary for the system to operate properly. For example, a new accounting package will require a chart of accounts, vendors and customers to be entered before it can be used effectively.

To use QuikVixBOL, Java must be installed, and a 600DPI LaserJet Printer that supports HP PCL or PostScript must be available.

1.1 Getting Started

1.1.1 Download and install Java

Java can be downloaded for free from Sun Microsystems' web site at <http://java.sun.com>. Here is a direct link to an archived version of Java 2. [Java 1.3.1.6](#).

Java 2 Standard Edition is all that is required (J2SE).

Download the Java Run Time (JRE) for running QuikVixBOL. Download the SDK to develop Java programs that instantiate QuikVixBOL.

Choose the appropriate platform, ie. Windows, Linux, Solaris, etc.

Follow the installation instructions to install Java.

1.1.1.1 Download and install QuikVixBOL

QuikVixBOL is packaged in a ZIP file named qvdemo.zip. Save qvdemo.zip to a folder and open it by double clicking it.

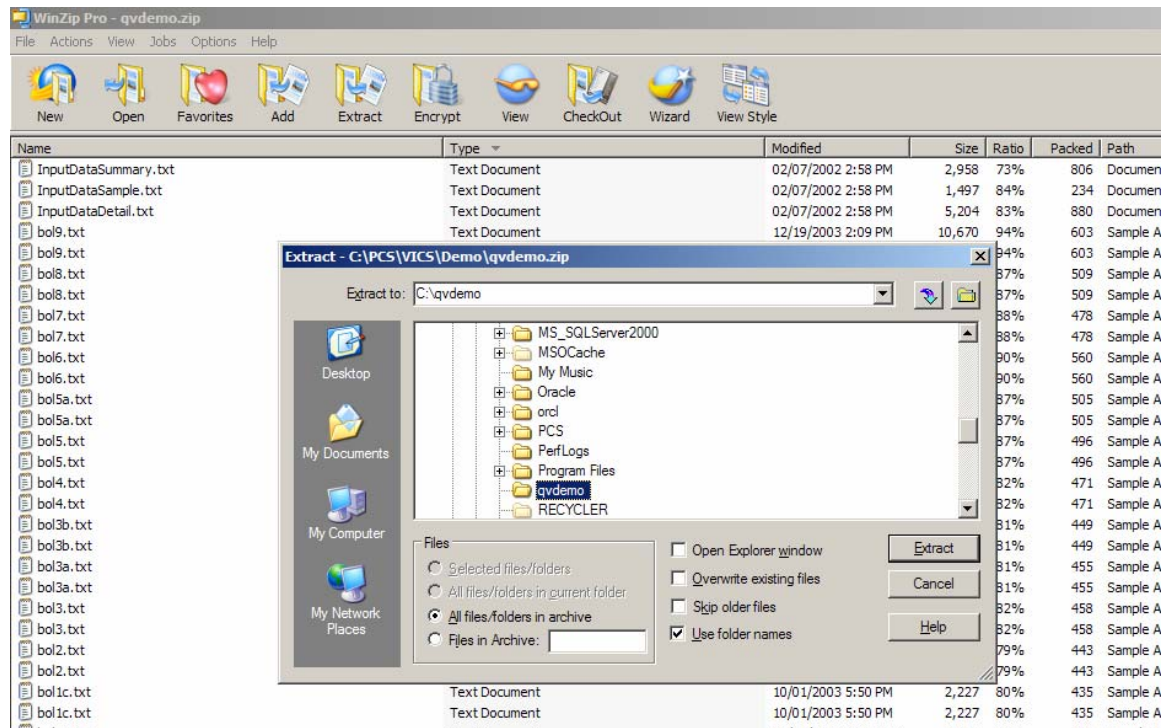

If it does not open, then download WinZip from the [WinZip](#) website. There is a free trial version.

Once the qvdemo.zip file is opened and displayed, extract the contents to a folder. For example, create a folder on the root of C: named qvdemo.

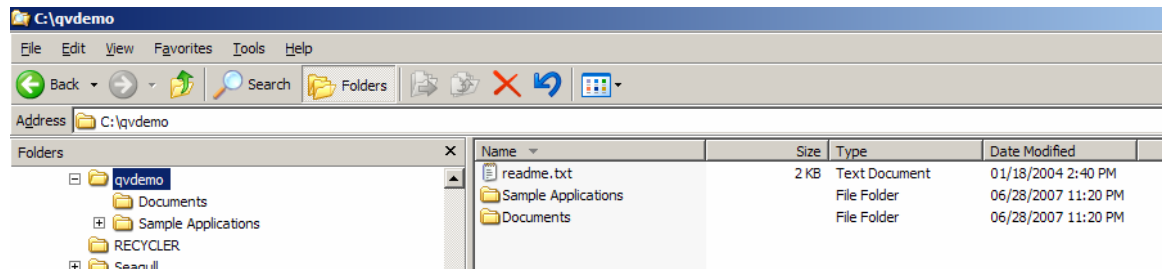

QuikVixBOL System Quick Start Guide

Extract the contents of the qvdemo.zip file to c:\qvdemo

The qvdemo folder will contain two new folders:

The documents folder contains the help files for QuikVixBOL. The Sample Applications folder contains the demo.

1.1.1.2 Configure QuikVixBOL

The Sample Applications folder contains a file named QuikVixBOL.ini. Open this file with a text editor like Notepad or on Linux, vi.

If the printer that you will be using is not physically connected to your parallel port then change the line that reads "Printer=LPT1".

Windows network printers are typically expressed in the format [\\server\printer_name](#). For example: if the Server name is MyServer1 and the printer name is HPLJ4 then change the line that reads "Printer=LPT1" to "Printer=\\MyServer1\HPLJ4".

QuikVixBOL System Quick Start Guide

On Linux the format is "Printer=/dev/lp0".

The QuikVixBOL.ini file is case sensitive. Java is case sensitive.

Changing the line that reads "Printer=LPT1" to "printer=lpt1" will fail.

1.1.1.3 Printing a Sample Bill of Lading

The QuikVixBOL demo ships with several sample bills of lading to aid in the development of your bill of lading.

Open a command prompt by clicking Start->Run and typing CMD in the command window.

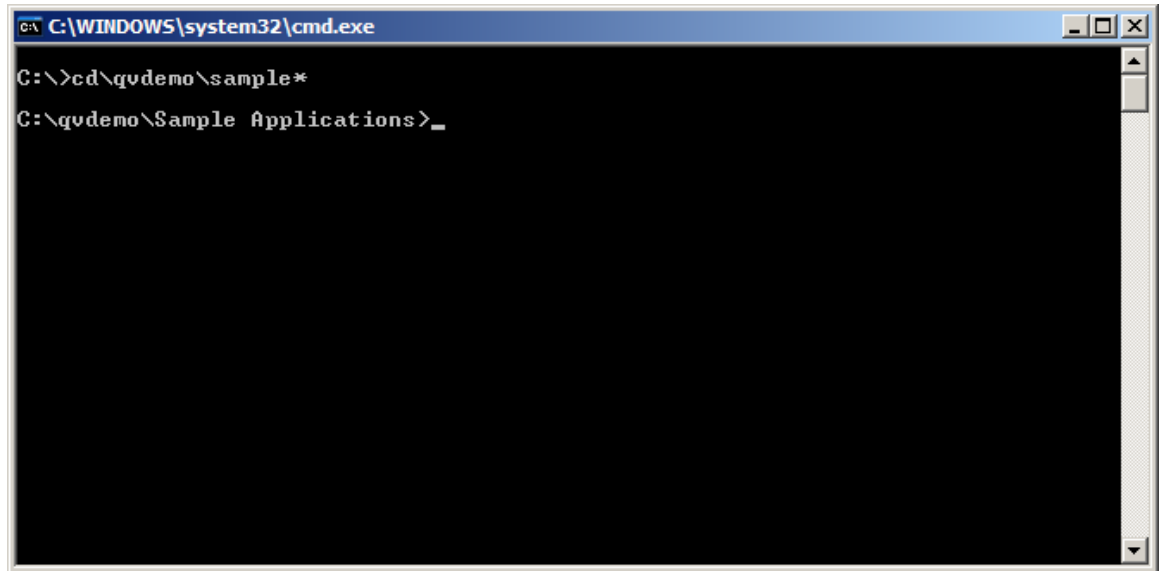

A command prompt will open.

Type `cd\qvdemo\sample*` and press enter

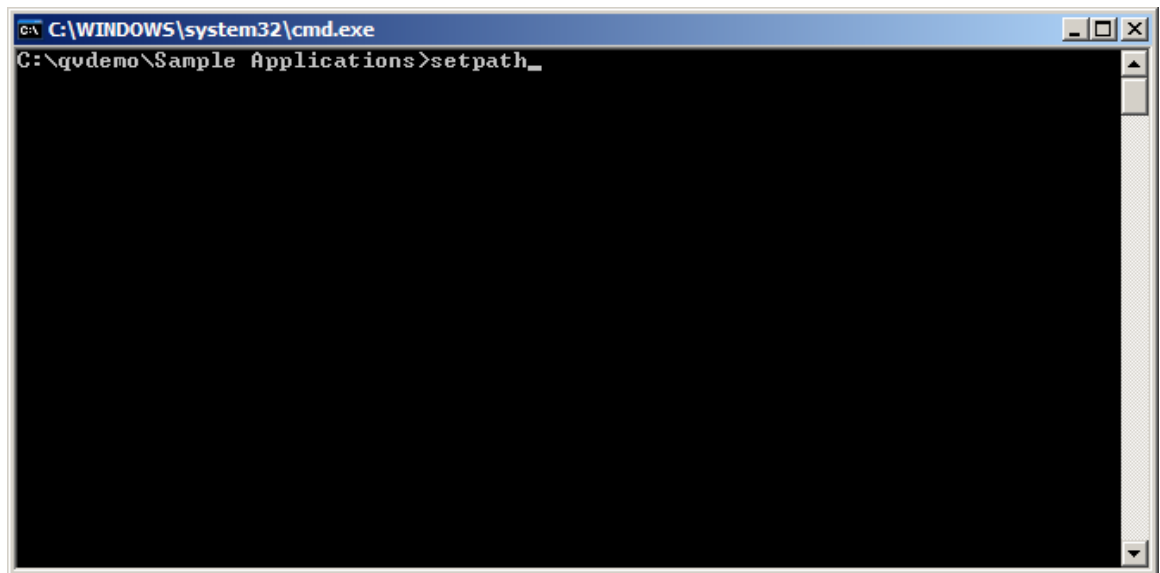

QuikVixBOL System Quick Start Guide

A screenshot of a Windows command prompt window. The title bar reads "C:\WINDOWS\system32\cmd.exe". The command history shows the user navigating from the root directory to a subdirectory: "C:\>cd\qvdemo\sample*" followed by "C:\qvdemo\Sample Applications>". The cursor is at the end of the second command, ready for the next input.

At the c:\qvdemo\Sample Applications> prompt type setpath and press enter.

A screenshot of a Windows command prompt window, similar to the one above. The title bar reads "C:\WINDOWS\system32\cmd.exe". The command history shows the user entering the "setpath" command: "C:\qvdemo\Sample Applications>setpath_". The cursor is at the end of the command.

Type (case sensitive) java QuikVixBOL bol1.txt and press enter

QuikVixBOL System Quick Start Guide

A bill of lading should have printed on the configured printer.

1.1.1.4 qvgui – QuikVixBOL GUI (Graphical User Interface)

The GUI was built for three purposes:

- 1) For those customers who wish to print VICS Bill's of Ladings by hand.
- 2) As a tool for customers to generate input files with their data.
- 3) As a sample application for customers to see how to implement QuikVixBOL within their infrastructure.

The source code to the GUI is included in the sample applications folder. Java programmers can use this sample code to build their own programs that interface with their systems.

To run the GUI type `java qvgui` and press enter.

QuikVixBOL System Quick Start Guide

The following screen will appear.

A screenshot of the QuikVixBOL GUI. The window title is "QuikVixBOL". It contains several input fields and sections:

- Date:** A text field.
- Generate Check Digit:** A checkbox.
- Print, Refresh, Exit:** Three buttons.
- Ship From:** Fields for Name, Address, City/State/ZIP, and SID.
- Bill of Lading Number:** A text field with a "Refresh the screen" button next to it.
- Carrier Name:** A text field.
- Trailer Number:** A text field.
- Seal Number:** A text field.
- SCAC:** A text field.
- Pro Number:** A text field.
- Special Instructions:** A text field.
- Ship To:** Fields for Name, Address, City/State/ZIP, and CID.
- FOB:** A checkbox.
- Third Party Billing:** Fields for Name, Address, and City/State/ZIP.
- Freight Charge Terms:** Radio buttons for Collect, Prepaid, and ThirdParty.
- Master BOL with underlying Bills:** A checkbox.
- Master BOL:** A checkbox.
- Customer Order Number Table:** A table with columns: Customer Order Number, # PKGS, Weight, Pal Yes, Pal No, Additional Shipper Info. It has 4 rows and an "Add Rows" button.
- HU QTY Table:** A table with columns: HU QTY, HU Type, PKG Q..., PKG Ty..., Weight, Haz Mat, Commodity Description, NMFC #, NMFC Cla... It has 4 rows and an "Add Rows" button.
- Fee Terms Section:** Radio buttons for Fee Terms Collect, Fee Terms Prepaid, Fee Terms Cust Check, Loaded by Shipper, Loaded by Driver, Counted by Shipper, Counted by Driver Pallets, and Counted by Driver Pieces.

The GUI will create the appropriate input file based on the data on the screen and then run the data file through the QuikVixBOL program to produce the VICS Bill of Lading.

QuikVixBOL System Quick Start Guide

1.1.1.5 Trouble shooting

If the bill of lading does not print check the following:

- 1) The printer name is correctly spelled in the QuikVixBOL.ini file.
- 2) Confirm that the tag Printer= is proper case.
- 3) Confirm that other programs can print to the printer from MS Word for example.
- 4) Confirm that the printer supports HP PCL or PostScript
- 5) Confirm that the printer is a 600 DPI printer.
- 6) Look in the C:\Documents and Settings\username\Local Settings\TEMP folder. If there are 20,000 + empty files in there, delete them.
- 7) Make sure the log level is set to Debug in the QuikVixBOL.ini file, then look in the C:\PCS\VICS\Demo\Sample Applications\logfiles folder. There will be log files in there that should give a clue as to why the print job failed.

1.2 Use the demo

Please use the demo program as long as you like. There is no time limit. When you have decided to purchase QuikVixBOL, please contact us.
